

Pushing Limits, Setting the Standard

Polyurethane & Rubber

Modular Polyurethane Panels

Modular Poly/Wedgewire Panels

Modular System Components

Complete Range of Products

Complete Range of Products

Aury sets a new bench mark in quality and service for modular screening systems. Our manufacturing processes and design has been continually refined for many years to produce a superior product in dimensional accuracy and finished quality.

Aury clipping system provides extra friction grip, providing a high panel security in the clipping rail. It also seals between the mating surfaces preventing wear from the entry of fine material.

Aury panels are available as standard 305mm wide to up to 610mm long. Our aperture range is continually growing to suit our customers' needs and special requirements.

Modular Wedgewire Panels

For many years Aury has been a leading manufacturer of wedge wire for the mining industry. This experience has now been combined with Aury to produce a modular wedge wire panel to meet the challenges of higher metallurgical efficiency demanded by modern mineral processing.

The panels are available as standard 305mm x 610mm or 610mm x 610mm. Apertures and wire profiles are manufactured to suit the customers' requirements.

Modular System Components

A full range of quality components completes the modular system to suit any screen application.

Polyurethane Cross Tensioned Screencloth

At Aury we will design and manufacture to suit your requirements. Our Polyurethane Cross Tensioned Screencloths are produced in several types to suit most applications.

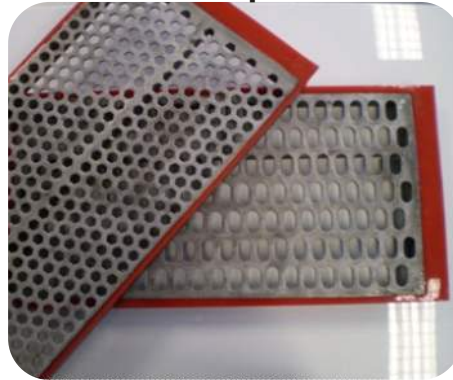

Types Of Polyurethane Panels

Polyurethane Long Shot

Punch Plate Screen Panels
305 and 610 panel sizes

Polyurethane Screens
305 and 610 panel sizes

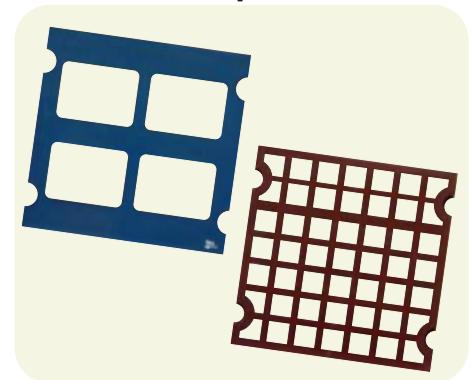

Wedge Wire Screen Panels
305 and 610 panel sizes

Aury Deck Fixing System is strong & durable

Polyurethane Screens
305 x 305 panel sizes

POLYURETHANE IS RECOGNISED AS ONE OF THE BEST AND MOST VERSATILE MATERIALS FOR SCREENING SURFACES

The use of Polyurethane Panels as a screening surface has significant advantages provided the application is appraised correctly:

- Polyurethane Panels have a long life when screening materials such as quartz; silicon sand, gravel etc.
- Polyurethane exhibits the characteristic elasticity of rubber .
- The distinct advantage Polyurethane Panels have over rubber is the accuracy of the cast apertures.
- Polyurethane Panels, allow for more precise screening compared to the punched apertures in rubber.
- Aury has allowed for the correct relief angle to be designed into each application, ensuring optimum performance.
- As a result 'pegging' and 'binding' is minimised, reducing the frequency of scheduled stoppages caused by screening surface failure.

Important

Aury manufacture different types of fixing systems.
